Hi-shine microfibre cloth

Hi-shine cloth for a fast, smear-free clean on glass, steel and polished surfaces.

Designed for its smear-free cleaning performance the thick, low-lint semi-disposable cloth can be used damp or dry. It is highly absorbent, easy to wring out and dries quickly after use.

The microfibre technology means it picks up dust and traps dirt easily, while the cloth's short pile leaves a smear-free shine on polished surfaces.

Made from a 140gsm microfibre blend of polyester and polyamide, the cloth is 40cm x 40cm and available in four colours for colour coding.

Key features & benefits

Microfibre
Cleaning

Smear free
finish

No chemicals
required

Highly
absorbent

- A thick, low pile and semi-disposable microfibre cloth.
- Designed for smear-free, low-lint cleaning of polished surfaces.
- Microfibre cleaning without the need for chemicals.
- Highly absorbent, easy to wring out and quick drying.

Washing, care & maintenance

Wash separately. Do not use fabric conditioner.

How it's used

When dusting, the split fibres create static, which attracts dust leaving a smear-free finish.

Wet with water and wring out thoroughly. The fibre's capillary action helps scrape the surface, lifting and capturing dirt and bacteria.
